Brief History of the State of Florida and the City of Tallahassee

Thousands of years of Native American culture preceded the European discovery of the Florida peninsula. An estimated 100,000 Native Americans were living here at the time of its discovery by Juan Ponce de Leon in early 1513. As Ponce de Leon's arrival coincided with the Spring Pascua Florida festivities in Spain, he named the new land "Florida," which meant "filled with flowers." La Florida was also explored by another Spanish adventurer – Hernando de Soto. It is believed that de Soto and his army of over 600 men spent the winter of 1539-40 in an abandoned Apalachee Indian village located in what is now the city of Tallahassee.

Prior to 1821; Florida had consisted of two Spanish colonies that were ceded to Great Britain in the settlement of the Seven Years' War (1756-1763). In 1821 President James Monroe appointed Andrew Jackson as territorial governor. One of the new governor's first acts was to organize the territory into two counties, Escambia and St. Johns, with the Suwannee River serving as the dividing line. (In 1822, two more counties were added – Duval in the east and Jackson in the west). The legislative council met at Pensacola, the capital of West Florida, in 1822, and at St. Augustine, the capital of East Florida, in 1823. As these two chief settlements of the territory were separated by 400 miles of wilderness, it was desirable to select a central site as a capital. Two commissioners appointed by Governor William Pope Duval selected the then uninhabited area known as Tallahassee as the site for the permanent capital and the governor proclaimed it the capital on March 4, 1824. The territorial council met there for the first time in November of that year. Tallahassee had been the site of Indian settlements prior to and during the Colonial Era. Its name is a Creek Indian phrase generally believed to mean "old town" or "old fields." Florida was admitted to the union as the 27th state on March 3, 1845.

Population Statistics

According to the latest US Census estimates, Florida ranks 3rd population in the United States of America, Leon county ranks 22nd in population in the state of Florida and Tallahassee is the 7th largest city in the state.

	<u>Tallahassee</u>	Leon County	<u>Florida</u>	United States
Population 2016 (estimated US Census)	190,894	287,822	20,612,439	323,127,513
Population 2010 (actual US Census)	181,376	275,487	18,801,310	308,745,538

Tallahassee/Leon County Weather Facts

The average annual mean temperature at Tallahassee is 67.7°F; the average annual high temperature is 79.6°F, and the average annual low temperature is 55.8°F. July is typically the hottest month, with an average high temperature of 92.1°F and an average low temperature of 72.0°F. January is the coldest month, with average high and low temperatures of 63.5°F and 39.0°F, respectively. The official record-high temperature is 105°F, which was observed on June 15, 2011. The official record-low temperature is -2°F, which was observed on February 13, 1899, which gives Tallahassee the distinction of being the only location in Florida ever to have recorded a sub-zero temperature. Since that morning in 1899, the lowest temperature recorded in the modern historical record since 1948 was 6°F on January 21, 1985.

The average annual total rainfall is 58.87 inches. July ranks historically as the wettest month, with an average total rainfall of 7.83 inches, and October ranks as the driest month, with an average total rainfall of 2.91 inches. Summer is the wettest season, and autumn is the driest. The record 24-hour total rainfall is 10.13 inches, which occurred on June 11-12, 2001. The average annual snowfall is a trace. Although snow flurries are seen every few years, measurable snow (0.1 inch or greater, by definition) is seldom observed in Tallahassee, having occurred only five times since 1938 and last occurred on December 22-23, 1989, when 1.0 inch was recorded. The largest snowfall ever observed was 2.8 inches on February 12-13, 1958.

In 2016, the temperature ranged from a minimum of 26°F (on January 20 and 24) to a maximum of 100°F (June 13 and August 23). The annual mean temperature registered 70.8°F, which was some 3.1°F above average and made 2016 the second warmest year on record since 1948. In particular, the fifth-warmest spring (March through May), warmest summer (June through August), and second-warmest autumn (September through November) were observed. Moreover, September was the warmest, July the second warmest, August the third warmest, March the fourth warmest, and December the fifth warmest on record. Total rainfall for 2016 was 59.82 inches, which was some 0.95 inches above average and equal to the median of the annual totals since 1948.
